

Homework – Due Tomorrow, March 20

at the start of class

1) On a notecard, write these headings: *(I have some – grab one below this screen before you leave if you need one)*

- A. Your Name:**
- B. Title of film/show:**
- C. Genre of film/show:**
- D. Beginning/Middle/End**
- E. Number of cuts:**
- F. How many camera positions total:**

2) Choose a movie or a produced for TV/internet show (so NOT a sporting event or an unscripted/unedited video clip online) to watch. And aim to watch film/show on something bigger than a phone, please.

3) Fill in the information for these headings:

- A. Your Name:**
- B. Title of film/show:**
- C. Genre of film/show:**

4) Then, for EXACTLY TWO MINUTES of the movie/show (time it!) record and keep a tally of these things:

- D. Beginning/Middle/End** *(circle approximately when in the film/show your two minutes are)*
- E. Number of cuts:** *(here, just keep a tally/use hash lines: ~~||||~~ ||)*

5) In the two minutes you kept track of, fill in this last item...

- F. How many camera positions total:** *(also just use tally/hash lines: ~~||||~~ ||)*

→ Try to estimate by thinking: how many times has the camera moved?

→ You may need to watch the scene/s again and think about...

- proximity: how close to the subject/what type of shot (long/close-up, etc.)
- angle: where is the position of the camera

Due tomorrow at the start of class. *5 points for completing the task, 5 points for following directions.*
