1) Taking one or two lights…

2) Set up the lighting in the space so it will enhance the sentiment of the scene.

3) Do a 'test shoot'
   - if you have your cameras handy, use those, but if not, just use your phones
   - you may want to take pictures and videos

4) Change the set-up and film again, & again…
   - change where you have the light source/s, distance, angle, brightness/softness…

5) And have an ongoing discussion what you are seeing and determine as a group what will help tell your story best

Don't forget to document this with for your blog
