

## Premiere Pro Tutorial

*getting you a little familiar with the editing program*

- 1) Open Premiere Pro CC (find it on the list or search it). While it opens, move on to #2...
- 2) Open this link to the Adobe tutorial:  
<https://helpx.adobe.com/premiere-pro/how-to/edit-videos.html?playlist=/ccx/v1/collection/product/premiere-pro/segment/designer/explevel/beginner/applaunch/basictraining/collection.ccx.js>
- 3) You will complete all the parts of this tutorial – except for changes/notes below...
- 4) You do NOT need to download the trial, you just opened the program.
- 5) You do NOT need to get the sample files, they are on the Public Server (directions below on where they are)
- 6) Begin the tutorial with “1 Understand the workspace”
  - a) at 10 seconds, when you click on “New Project”, you will **name your project your last name** and additionally (this is not mentioned in the video) you will **choose where to save it** by clicking on “Browse” below the name field and then > “This PC” > “Public” > “IB Film” > “Premiere Pro Tutorial Student Projects”
  - b) at minute 4:04 when it asks you to go to the downloaded clips – you will do the following to **Import** the clips from the Public Server (our network does not all you to do this via the Media Browser like the video).
    - i) At the top of the Premiere Pro screen, go to “File” > “Import” > Click on “This PC” > find “Public”> “IB Film”> “Premiere Pro”
    - ii) You will import the files in the three folders (though you cannot import folders; you need to go into the folders and select the files to import – there are directions later in the video about how to create the folders again...).
- 7) Continue all of the videos (I don’t think there are other clarifications needed...)
  - if you have questions: ask
  - take your time, you are learning the program, don’t be stressed
  - you are working on this today and tomorrow; there are additional how-to videos you can choose from if you reach the end of this tutorial page.
- 8) When you finish and export your film, please keep your name as the title and put it in this folder: Public > IB Film > Premiere Pro Tutorial Student Projects > \_Final Film

And see page two....

## More Work with Premiere

If you finish the initial tutorial and have exported the film, go back to your project and experiment with these tools. *You cannot finish your editing experimentation... you can find all the [Adobe tutorials here](#) – experiment or just watch a few.*
